 Myerson (1981)

Common value model: Wilson (1969) General model: Milgrom (1981b), Milgrom and Weber (1982)

Two basic formats of auctions:

(日) (周) (日) (日)

Two basic formats of auctions:

Sealed-bid format: First-price auction

Second-price auction

3

Two basic formats of auctions:

Sealed-bid format: First-price auction Second-price auction

Open format: English (or ascending-price) auction Dutch (descending-price) auction

Two basic formats of auctions:

Sealed-bid format: First-price auction Second-price auction

Open format: English (or ascending-price) auction Dutch (descending-price) auction

Other details such as minimum reserve price, entry fees, disclosure of bidder identities, bidder deposit etc. lead to many variations in practice

First-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays what he bid.

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

First-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays what he bid.

Oil leases and timber rights auction by U.S. Department of Interior.

Multi-object version used by RBI to sell government securities

First-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays what he bid.

Oil leases and timber rights auction by U.S. Department of Interior.

Multi-object version used by RBI to sell government securities

Second-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays the amount of the second-highest bid.

First-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays what he bid.

Oil leases and timber rights auction by U.S. Department of Interior.

Multi-object version used by RBI to sell government securities

Second-price auction: Bidders submit sealed bids to the auctioneer. The highest bidder wins and pays the amount of the second-highest bid. Multi-object version used by U.S. Treasury to sell government securities; a variation is used in Google search auctions

イロト 不得 トイヨト イヨト 二日

- Milgrom-Weber (1982) builds on model of Milgrom (1981b)
- A model that generalizes private values and common values

- 3

(日) (同) (日) (日)

- Milgrom-Weber (1982) builds on model of Milgrom (1981b)
- A model that generalizes private values and common values
- Bidder *i*'s value is V_i and information signal is X_i

- 3

- Milgrom-Weber (1982) builds on model of Milgrom (1981b)
- A model that generalizes private values and common values
- Bidder i's value is V_i and information signal is X_i
- Bidder i's expected valuation is a function of signals X₁, X₂,..., X_n E[V_i|X_i, X_{-i}]

イロト 不得下 イヨト イヨト

- Milgrom-Weber (1982) builds on model of Milgrom (1981b)
- A model that generalizes private values and common values
- Bidder i's value is V_i and information signal is X_i
- Bidder i's expected valuation is a function of signals X₁, X₂,..., X_n E[V_i|X_i, X_{-i}]
- Nowadays, referred to as the interdependent values model as each bidder's value depends on her own signal, and on signals of other bidders

イロト 不得下 イヨト イヨト 二日

Special cases of Milgrom and Weber model

• Private and common value: $V_i = a X_i + (1 - a) \sum_{j=1}^n X_j$, where $0 \le a \le 1$

Special cases of Milgrom and Weber model

• Private and common value: $V_i = a X_i + (1 - a) \sum_{j=1}^n X_j$, where $0 \le a \le 1$

• Private values: $V_i = X_i$

- Special cases of Milgrom and Weber model
 - Private and common value: $V_i = a X_i + (1 a) \sum_{j=1}^n X_j$,

where $0 \le a \le 1$

- Private values: $V_i = X_i$
- Common value: $V_1 = V_2 = \ldots = V_n$

• The random variables $(V_1, V_2, \ldots, V_n, X_1, X_2, \ldots, X_n)$ are *affiliated*

イロト 不得 トイヨト イヨト 二日

- The random variables $(V_1, V_2, \ldots, V_n, X_1, X_2, \ldots, X_n)$ are affiliated
- Affiliation is stronger than positive correlation. It is related to monotone likelihood ratio property introduced in Milgrom (1981a)

- The random variables $(V_1, V_2, \ldots, V_n, X_1, X_2, \ldots, X_n)$ are affiliated
- Affiliation is stronger than positive correlation. It is related to monotone likelihood ratio property introduced in Milgrom (1981a)
- Obtained Bayesian Nash equilibrium in common auctions

- The random variables $(V_1, V_2, \ldots, V_n, X_1, X_2, \ldots, X_n)$ are affiliated
- Affiliation is stronger than positive correlation. It is related to monotone likelihood ratio property introduced in Milgrom (1981a)
- Obtained Bayesian Nash equilibrium in common auctions
- Obtained expected revenue ranking of these auctions:
 English auction yields greater exp. revenue than second-price auction
 Second-price auction yields greater exp. revenue than first-price

auction

- SMRA alleviates, but does not totally eliminate, the exposure problem and the free-riding problem
- SMRA first used in the U.S. in 1995 by the F.C.C.
- Versions of the SMRA have been used throughout the world generating several hundred billion dollars in revenue for governments

• Do markets efficiently aggregate information dispersed among bidders? Debate between Hayek, Lange, and Lerner

- Do markets efficiently aggregate information dispersed among bidders? Debate between Hayek, Lange, and Lerner
- Wilson (1977) and Milgrom (1979) identify conditions under which the selling price in a first-price auction approaches the (unknown) common value as the number of bidders increases

- Do markets efficiently aggregate information dispersed among bidders? Debate between Hayek, Lange, and Lerner
- Wilson (1977) and Milgrom (1979) identify conditions under which the selling price in a first-price auction approaches the (unknown) common value as the number of bidders increases
- Milgrom (1981b) explores information revelation in second-price auctions with general values

Markets and allocative efficiency

• Wilson (1985): Allocative efficiency of double auctions

Markets and allocative efficiency

- Wilson (1985): Allocative efficiency of double auctions
- Milgrom and Stokey (1982): No-trade theorem

A D > A B > A B > A

Markets and allocative efficiency

- Wilson (1985): Allocative efficiency of double auctions
- Milgrom and Stokey (1982): No-trade theorem arises because of informational efficiency of markets

Paul Milgrom's contributions to other areas in economics

- **Reputation Formation:** Milgrom and Roberts (JET 1982), Kreps, Milgrom, Roberts, and Wilson (1982)
- Game Theory: Milgrom and Weber (MOR 1985), Milgrom and Roberts (1990, GEB 1991)
- Industrial Organization:

Milgrom and Roberts (Econometrica 1982, JPE 1986)

- Organization Economics: Milgrom and Roberts (AER 1990), Holmstrom and Milgrom (Econometrica 1987, JLEO 1991, AER 1994)
- Financial Economics: Glosten and Milgrom (JFE 1985)
